

ATT Audio Controls is pleased to introduce the latest version of Merging Technologies' renowned DAW solution

Pyramix™ V6.0 Native

Pyramix V6.0 is a software-only version of Pyramix that meets the needs of radio broadcasters, small post facilities, MIDI studios and CD mastering houses requiring a professional but low-cost or portable solution to their audio recording, editing, mixing and mastering needs.

You can now specify Pyramix Native in the same way as the main Pyramix system with the same application running on any suitable Windows XP or Vista desktop PC.

Pyramix Native retains all the real-time editing and mixing capabilities of Merging's main Pyramix system and supports all the same audio formats, including: PMF, WAV, BWF, AIFF, OMF and CD Image files that can be mixed within the same project. The integral video playback and MIDI Synchronisation are also standard (except Broadcast Pack configuration) utilising Merging's Virtual Transport technology.

Pyramix Native basically offers the same software configurations as Pyramix MassCore, but relies on the Windows XP or Vista operating system for all its processing requirements. Additionally, the Broadcast Pack configuration of Native offers a maximum of 24 I/O with 96 I/O for all the other Native configurations.

Pyramix Native can be purchased direct from ATT. Simply order one of the Packs as outlined below via phone or email your order to info@attaudiocontrols.com
